

Third jQuery Exercise

As part of this exercise, you are required include the jQuery ready function to ensure the page is loaded before adding some html to it using JavaScript or jQuery. Download the zip file included on moodle with this lab exercise. Open looping.html in a browser. Review the javascript code in js/looping.js.

Exercise 1 – Updating JavaScript to jQuery.

1. Download the zip file included on moodle with this lab exercise.
2. Note in the ready.html file there is a div with an id attribute. In the js folder, create a javascript file which targets this id, and update its innerHTML property so that a paragraph is included in the div element. Write JavaScript to complete this step.
3. In the <head> element of ready.html, include a <script> tag referencing the javascript file created in step 2.
4. Save all changes and open ready.html. Confirm if the paragraph is now present on the page.
5. Modify the javascript file from step 2, so that it wraps the javascript into the jQuery ready method:

```
$(document).ready(function(){  
  //add code here.  
});
```

6. Make sure to include the jquery file in a script tag in the ready.html file.
7. Save all changes and open ready.html. Confirm if the paragraph is now present on the page.
