

Module Website

Install Instructions for Module Website (Pierce Jordan)

Student No: 10011177

Automatic Installation:

Step 1:

Download this [setup.exe](https://www.dropbox.com/s/7vyjzn78pyn5jjt/setup.exe?dl=0) (<https://www.dropbox.com/s/7vyjzn78pyn5jjt/setup.exe?dl=0>)

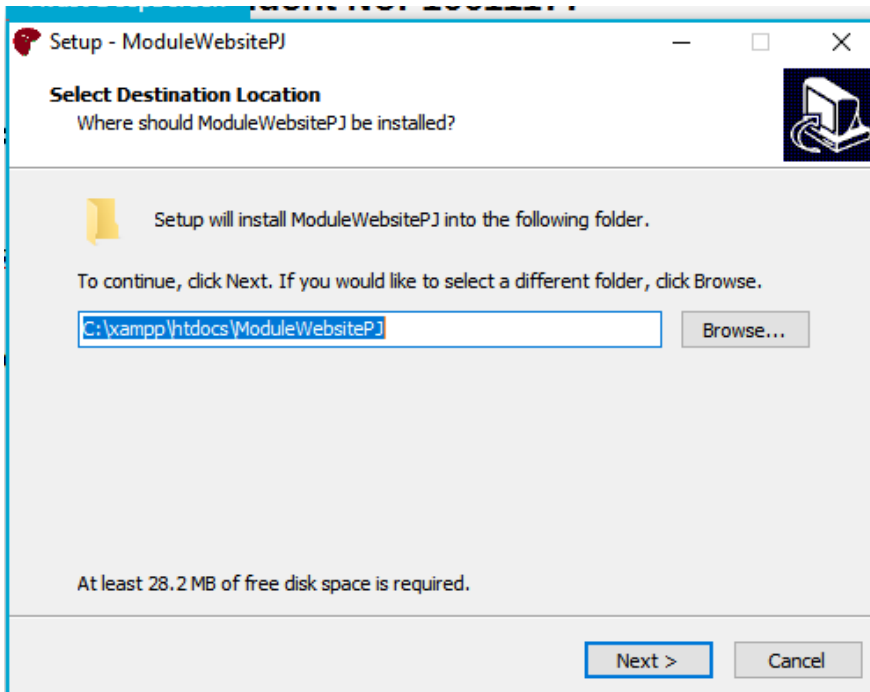

Step 2:

Run downloaded *setup.exe*

(this may cause antivirus to wake up but there is nothing malicious in the setup.exe)

Step 3:

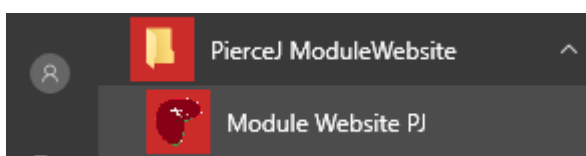

Change default location if required to **%pathtowebsserver%\ModuleWebsitePJ**

Step 4:

Launch Module Website PJ short cut from start menu->PierceJ ModuleWebsite

Provided application is installed to **ModuleWebsitePJ** the website should launch without issue.

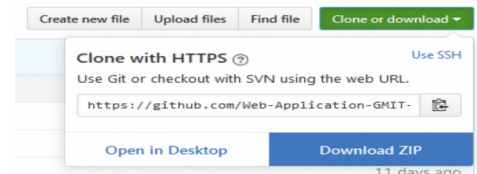

If there are issues please refer to manual installation guide below.

Manual Installation:

Step 1:

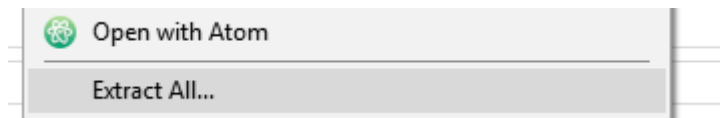

Download this [repository](#) from github. Click “Clone or download” and select “Download ZIP option”.

This will download a file called **PierceJ_ModuleWebsite-master.zip** to your Downloads folder or to a specified folder of your choice

Step 2:

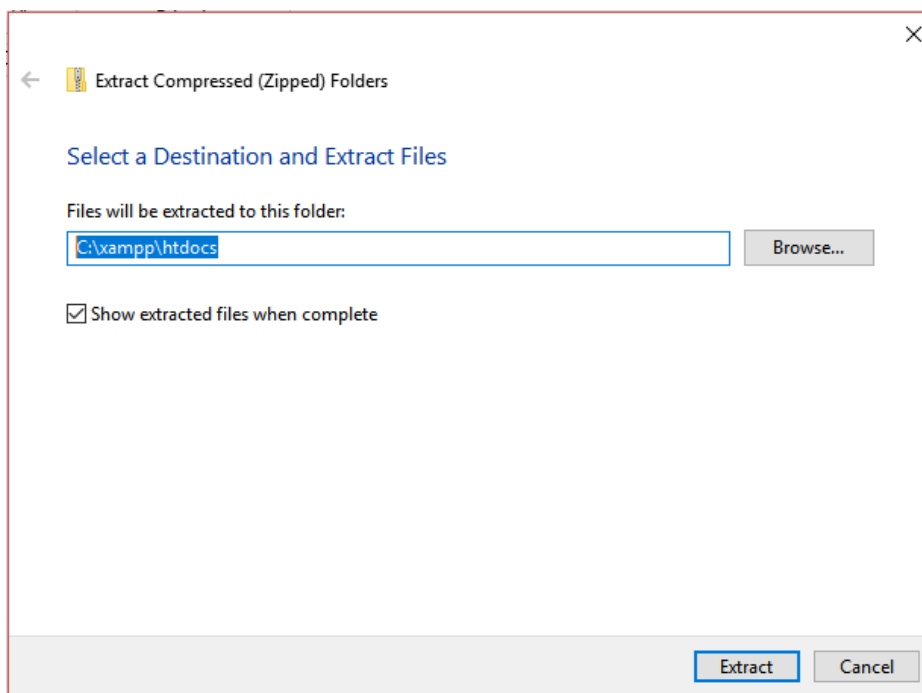

Right-Click on PierceJ_ModuleWebsite-master.zip and select Extract All option

Step 3:

Using the wizard extract files directly to %WEBSERVER%. This will place files into a subfolder called PierceJ_ModuleWebsite-master

%WEBSERVER% = path to your webserver installation. E.G. xampp = C:\xampp\htdocs

Step 3:

Launch browser of choice (Developed on Firefox, Tested on IE11, EDGE and Chrome).

Step 4:

Paste in following to browser address bar. This site contains a link to my final project.

http://localhost/PierceJ_ModuleWebsite-master/
