

First jQuery Exercise

As part of this exercise, you are required to download the zip file included with this exercise on moodle. Just unzip the file, and open the basic-example.html file in a browser. Review the script tags in the html. Also, review the basic-example.js file included in the js folder. Make sure you understand what is going on with the jQuery commands before attempting the first exercise below:

Exercise 1 – jQuery chaining.

1. In basic-example.js, note the following jQuery instruction:

```
$('li:lt(3)').hide().fadeIn(1500);
```

2. See the comments included just above this instruction. As part of this exercise, modify this instruction to perform the following operations:
 - a. Select the first two list items – note the lt filter with index number (lt – less than).
 - b. Hide the selected elements.
 - c. Add a delay of 0.5 seconds.
 - d. Add a fadeIn method passing an argument of 1.5 seconds.
 - e. Add a fadeOut method passing an argument of 1.5 seconds.
 - f. Add a fadeIn method passing an argument of 1.5 seconds.

These methods should be chained like in the example to the selection.

3. Save changes and reload basic-example.html. See the effects of chaining on the web page.
