# Main Project

## Install Instructions for Main Project (Pierce Jordan)
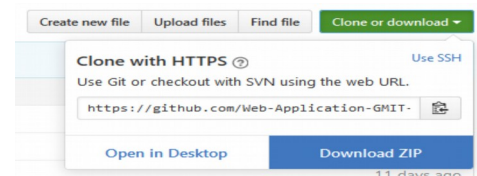

## Student No: 10011177

## Manual Installation:

### Step 1:

Download this *repository* from github. Click "Clone or download" and select "Download ZIP option".

This will download a file called ***PierceJ_10011177_Project-master.zip*** to your Downloads folder or to a specified folder of your choice
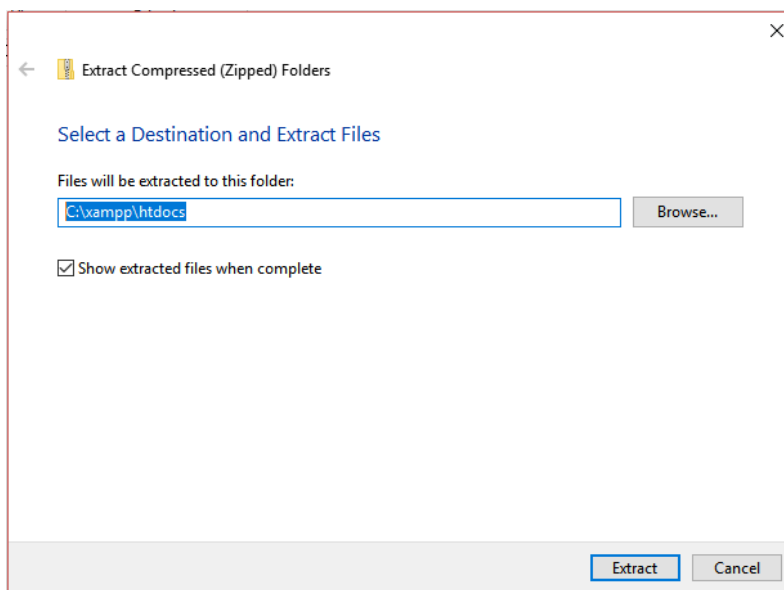

### Step 2:

Right-Click on ***PierceJ_10011177_Project-master.zip*** and select Extract All option

### Step 3:

Using the wizard extract files directly to %WEBSERVER%. This will place files into a subfolder called ***PierceJ_10011177_Project-master***

%WEBSERVER% = path to your webserver installation. E.G. xampp = C:\xampp\htdocs

### Step 3:

Launch browser of choice (Developed on Firefox, Tested on IE11, EDGE and Chrome).

### Step 4:

Paste in following to browser address bar.

http://localhost/PierceJ_10011177_Project-master/

### Step 5:

DB is located in %WEBSERVER%\*PierceJ_10011177_Project-master\DATABASE\web_apps.sql*

### Step 6:

Launch browser and type in "localhost". Provided XAMP(WAMP) are running you should be able to login to the PHPMYADMIN and import the sql file

### Step 7:

Once logged into PHPMYADMIN select the home icon then the database tab on right

### Step 8:

type web_apps in "Create database" input field and click create

### Step 9:

Click on newly created web_apps( **DB needs to be named web_apps**)

**Step 10:**

Click on click (1)import and (2) browse

**Step 11:**

Click on click (1)import and (2) browse
