Main Project

Install Instructions for Main Project (Pierce Jordan)

Student No: 10011177

Automatic Installation:

Step 1:

Download this PJMPsetup.exe *(https://www.dropbox.com/s/jtr7ccjff9353iz/PJMPsetup.exe?dl=0)*
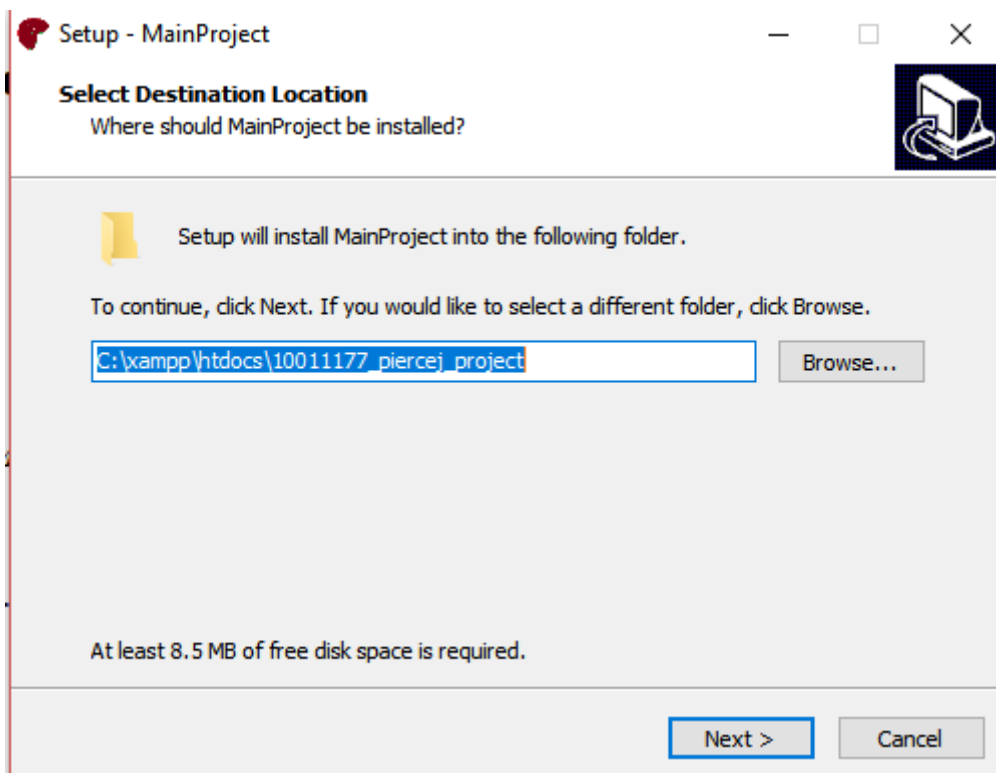

Step 2:

Run downloaded *PJMPsetup.exe*
(this may cause antivirus to wake up but there is nothing malicious in the setup.exe)

Step 3:

Change default location if required to **%pathtowebserver%\10011177_piercej_project**
Click **Next->Install** and allow installer to complete Click **Finish**

Step 4:

Run shortcut "PierceJ MainProject" from Start Menu->PierceJ MainProject.

Provided application is installed to **10011177_piercej_project** the website should launch without issue.

If there are issues please refer to manual installation guide below.
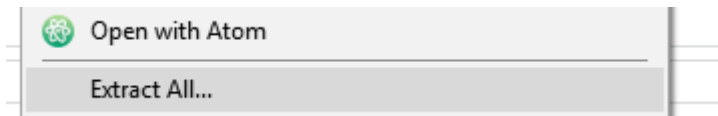

Manual Installation:

Step 1:

Download this *repository* from github. Click "Clone or download" and select "Download ZIP option".

This will download a file called ***PierceJ_10011177_Project-master.zip*** to your Downloads folder or to a specified folder of your choice
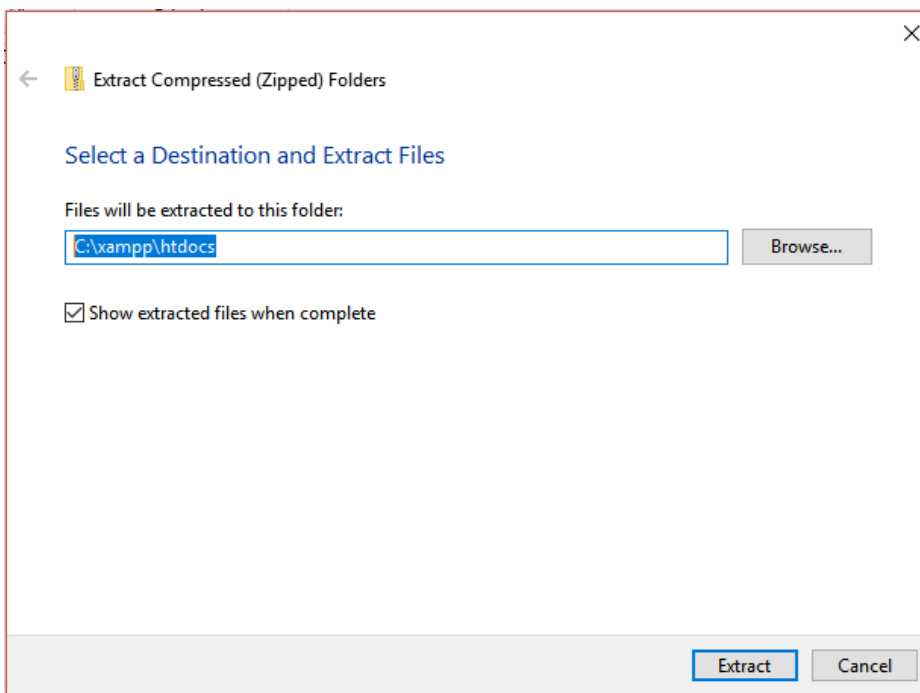

Step 2:

Right-Click on ***PierceJ_10011177_Project-master.zip*** and select Extract All option

Step 3:

Using the wizard extract files directly to %WEBSERVER%. This will place files into a subfolder called ***PierceJ_10011177_Project-master***

%WEBSERVER% = path to your webserver installation. E.G. xampp = C:\xampp\htdocs

Step 3:

Launch browser of choice (Developed on Firefox, Tested on IE11, EDGE and Chrome).

Step 4:

Paste in following to browser address bar.

http://localhost/PierceJ_10011177_Project-master/
