# HTML CSS JavaScript Lab

This lab, as it is the first lab of the second semester, is intended as an exercise to refresh the students memory on some HTML, CSS and JavaScript.

Exercise 1 – Create a web page

For this lab please create the following page:

Some guidelines are outlined below to help create this page though feel free to make some of your own design decisions in terms of layout and style.

1. Two images are available with this lab on Moodle. For the body use Hobart.jpg and for h1 use elderflower.png.

2. For the main white box, with the greeting and order details, use a div. Within this div use another div for the greeting, and include a table for the order details.

3. Create an external stylesheet. Set properties for width, height, background-color, margins and any other properties which will enhance the style of the page.

HTML CSS JavaScript Lab

4. To set the greeting and also the values in column 2 of the table, use JavaScript. For example,

<u>Html</u>:

```
<tr>
  <td>Custom sign: </td>
  <td id="userSign"></td>
</tr>
```

<u>JavaScript:</u>

```
var sign = document.getElementById('userSign');
sign.textContent = 'Montague House';
```

5. Add some comments to your Javascript.
